

Anti-theft / Anti-damage:

ASN system is the right added value for your vehicle, providing at a low cost, the peace you deserve from:

- **Theft: ASN is an anti-theft system based on :**

GPS: The system can warn you of the movement of your vehicle outside a set geographical perimeter (using GPS).

Input Contacts: is equipped with two input contacts that can be used to create any vehicle protection circuit (ex. Opening doors/windows, presence detection sensor, etc.).

Anti-lifting: Through dedicated electronics, ASN it is able to detect the attempted lifting of the vehicle;

Siren: thanks to the possibility of driving 1 output contact, through its closing/opening, on detection of attempted theft ASN will sound a siren connected to it.

- **Motor block :** By means of an electrician installation, it is possible to connect an ASN OUTPUT to the starting motor of the vehicle. This output can be activated remotely by means of a simple SMS to prevent the vehicle from starting.
- **Battery control:** ASN detects the vehicle's battery level in real time, signalling any discharge the battery level of the vehicle, thus preventing unnecessary inconvenience.

Communication:

- **Alarms:**

ASN communicates any alarms in real time (together with the satellite position of the vehicle) directly to your mobile phone by SMS and VOICE CALL.

- **Satellite Positioning / Satellite Tracking:**

Thanks to GPS technology (satellite technology), ASN allows you to determine the position of your vehicle in real time by SMS, or track its movements from any computer connected to the Internet (PRO version).

Functioning — Installation:

SMALL only **6x5x3 cm**, can be installed and masked in any part of the vehicle;

ROBUST thanks to its mechanical and electronic features, it is **resistant to water, vapour and dust**.

EASY to INSTALL and use. **Configurable** by SMS, WEB and **APP** (x **IOS** (Iphone) and **Android**).

Versatility / Methods of use:

ASN is designed to meet all requirements. ASN can protect and control your vehicle with certainty. With low battery consumption, it can be used in any environment.

– ASN Power Supply:

ASN is equipped with its own rechargeable lithium battery as a back-up unit, able to guarantee operation for 72 hours, even in conditions of no external power supply. External power supply. ASN can be powered by any external 12V battery. NB: In the event of a discharged internal/external battery, ASN immediately notifies the owner.

– ASN positioning:

The ASN system has no particular contraindications for positioning; it can be fixed anywhere in the vehicle as long as it is not shielded from GPS satellite reception.

Available versions:

ASN is produced in 2 different versions.

The differences in the opposite table...
